THE FUTURE SOCIETY - POPULATION DYNAMICS FOLLOWING COVID-19

| BACKGROUND

The world population has drastically increased from 5.7 billion in 1994 to an estimated 7.7 billion in 2019. According to the 2017 World Population Prospects,[1] the number is expected to reach 11.2 billion in 2100, with the growth being attributed to declining mortality, high fertility rates in some parts of the world and demographic momentum. The world population is currently subjected to mega-trends with a larger, older, more mobile and concentrated population.

Characterized by a gradual shift in the age distribution towards older ages, an ageing population arises from this decreasing fertility trend and increased life expectancy. A result of declining fertility and increased longevity is the so-called global population ageing. The number of older persons (defined as over the age of 60) is expected to increase by 229% in Africa, followed by Latin America and the Caribbean (161%) and Asia (132%) between 2017 and 2050.[2]

Based on existing, agreed-on global mandates, a collective response requires a life-course approach, as well as a strong primary health care approach for promoting health and preventing disease at all ages, and ensuring the inclusion of health services within Universal Health Coverage (UHC) – including long-term care at home, in communities and when needed, within institutions – without financial burden[3].

COVID-19 has had wide demographic implications, including increased mortality rates, a disproportionate impact on the mortality of older persons, and increased vulnerability of certain migrant groups. The session highlights these groups disadvantaged by the impacts of COVID-19, though highlight the way forwards, suggesting the future of the society.

| OBJECTIVES

To explore the possible changes and the way forward on impacts of COVID-19 on population dynamics, particularly on urbanisation, immigration, ageing, and fertility behaviours.

Speaker

Tolullah Oni

Clinical Senior Research Associate / Joint Lead of the Global Health Research Group

University of Cambridge MRC Epidemiology Unit
United Kingdom

Tolullah Oni, a Public Health Physician and urban epidemiologist is the Principal of Oni et al. and founder of UrbanBetter. She is an Honorary Associate Professor and lead of the Research Initiative for Cities Health and Equity (RICHE) group at the University of Cape Town and a Clinical Senior Research Associate / Joint Lead of the Global Health Research Group at the University of Cambridge MRC Epidemiology Unit.

Born in Lagos, she completed her medical training at University College London, a Masters degree in Public Health at the University of Cape Town and a doctorate in Epidemiology from Imperial College London, UK.

Profiled in the Lancet journal, Science magazine, and the British Medical Journal, she is a Fellow of the African Academy of Sciences, past co-chair of the Global Young Academy and the South African Young Academy of Science, 2015 Next Einstein Forum Fellow, 2019 World Economic Forum Young Global Leader, and a 2020 Next Generation Foresight Practitioner Fellow.

Her global practice is grounded in a science-informed, Africa-led, health foresight approach to generating new knowledge that supports partnership between science, policy and societal role players. She is passionate about identifying creative strategies to address complex urban population health challenges in rapidly growing cities globally.
