**FORMS OF DISCRIMINATION, SOCIAL EXCLUSION WITH SPECIFIC FOCUS ON
INEQUITABLE IMPACT OF COVID-19 PANDEMIC**

| BACKGROUND

Almost everywhere in the world, certain groups of people more than others experience severe forms of deprivation and discrimination, violence, abuse and extortion, and even detention and incarceration (including arbitrary arrest) due to their race, ethnicity, religion, gender, age, citizenship status, or sexual orientation. Human mobility has increased significantly during the last two decades, as internally displaced or international migrants seek to escape wars, conflicts, ethnic persecution, political instability, armed violence, extreme poverty, income inequality, and, increasingly, climate change impacts. Many of these drivers of population movement originate in corporate practices (e.g., the continuing international arms trade), government policies (e.g., a proliferation of trade and investment agreements compromising livelihoods), and national and global failures to deal effectively with climate change. Extractivism has led to forced displacement and dispossession of indigenous communities all over the world. Many of those most affected by displacement or forced migration are women and children. Others face discrimination within their own countries and may seek migration or refugee status to avoid violence, including members of LGBTQ+ communities, or those discriminated against based on race, religion, ethnicity, or other minority differences. Aggravation

The COVID-19 pandemic has exacerbated these existing social exclusion and prejudice. People of color, people in lower-income households, indigenous communities, unauthorized migrants (especially those in detention centers), refugees and asylum seekers, and prisoners (including political prisoners) have experienced a higher burden of the pandemic. These vulnerable populations and socially excluded groups were heavily impacted in terms of higher prevalence of infections, higher severity of the disease, compromised access to healthcare services, and higher rates of deaths. Mental health impacts, and increase in gender-based violence and domestic violence have also been seen.

| OBJECTIVES

- Describe the forms of discrimination and social exclusion and violence against population groups due to their poverty, race, ethnicity, gender, age, citizenship status, and sexual orientation and the impact on people's health and wellbeing.
- Identify the underlying political, economic, and social drivers of these forms of discrimination, social exclusion, and violence.
- Discuss the role of COVID-19 in exacerbating these forms of discrimination and the socioeconomic determinants that shape the COVID-19 response leading to these inequities.

Chair / Panelist

Bridget Lloyd

Ex Global Coordinator

People's Health Movement
South Africa

Bridget Lloyd: is South African and has worked in non governmental organisations and social movements for 30 years. Initially trained as a registered nurse and midwife, she completed her Masters in Public Health at the University of Western Cape in 2010 focussing on Human Resources requirements for a national health insurance. In 1990, she started working in the NGO sector as a Primary Health Care nurse and trainer with street children, youth programmes, community childcare and Community Health Worker (CHW) programmes; and later in management, coordination and development of CHW programmes. She was coordinator of Global Health Watch 2, an alternative world health report –published in 2008. From 2009 – 2019 she was the global coordinator of the People’s Health Movement (PHM). She remains involved with PHM both globally and in South Africa.
