

Health System Resilience to Climate Change

Diarmid Campbell-Lendrum,
WHO

Two tasks for public health in the face of climate change

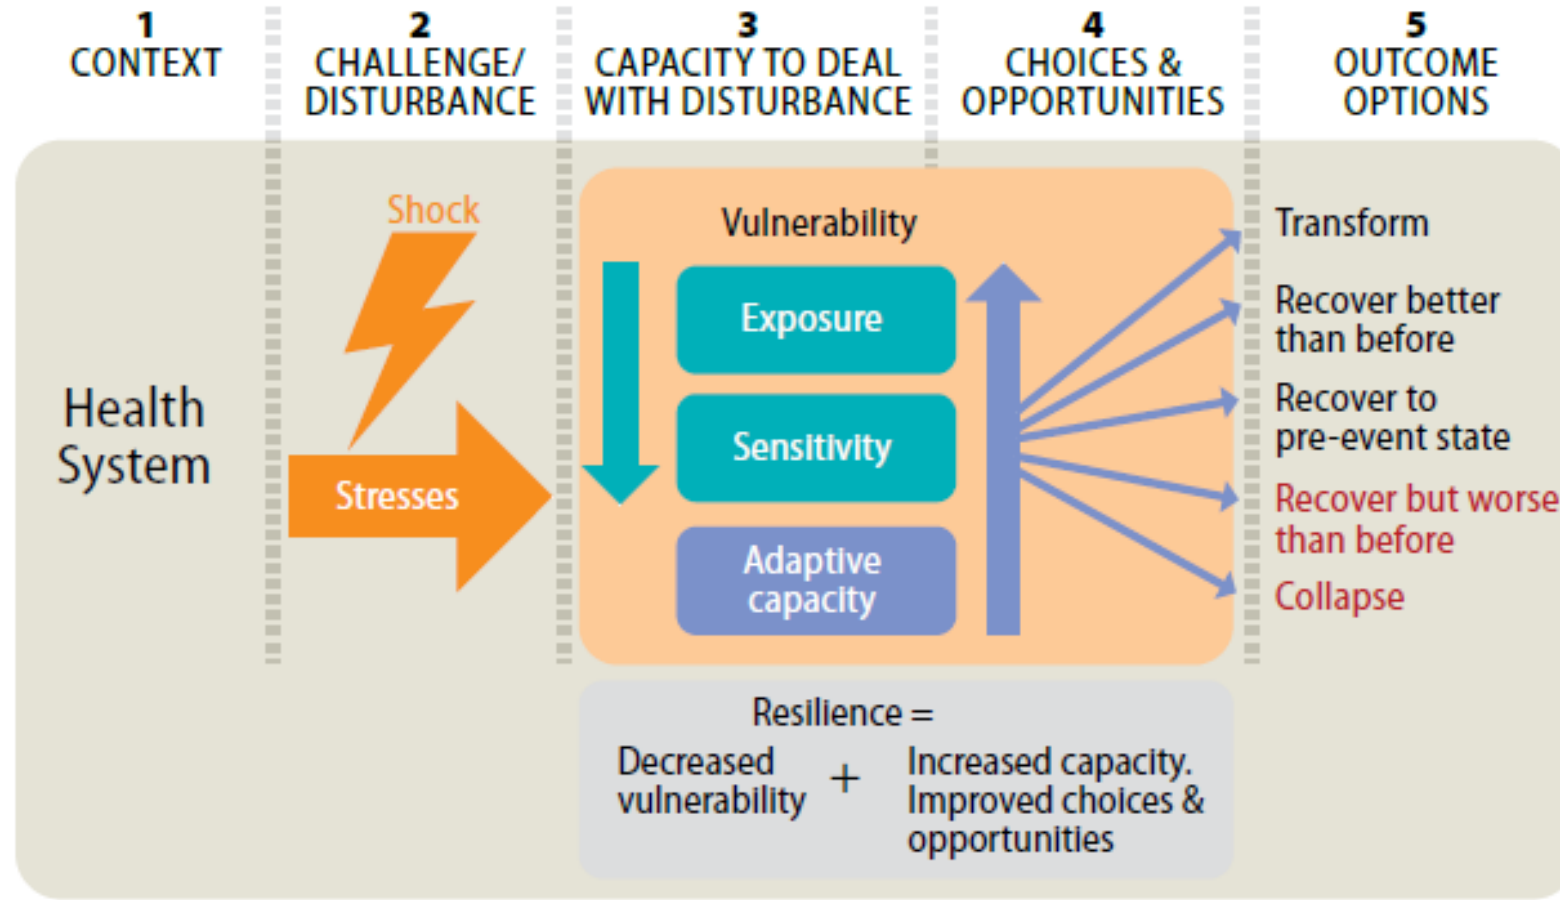

Help reduce carbon emissions, while promoting health (e.g. ↓ air pollution)

Protect health from full range of rising climate risks

WHO promotes a system-based approach to building resilience to climate change

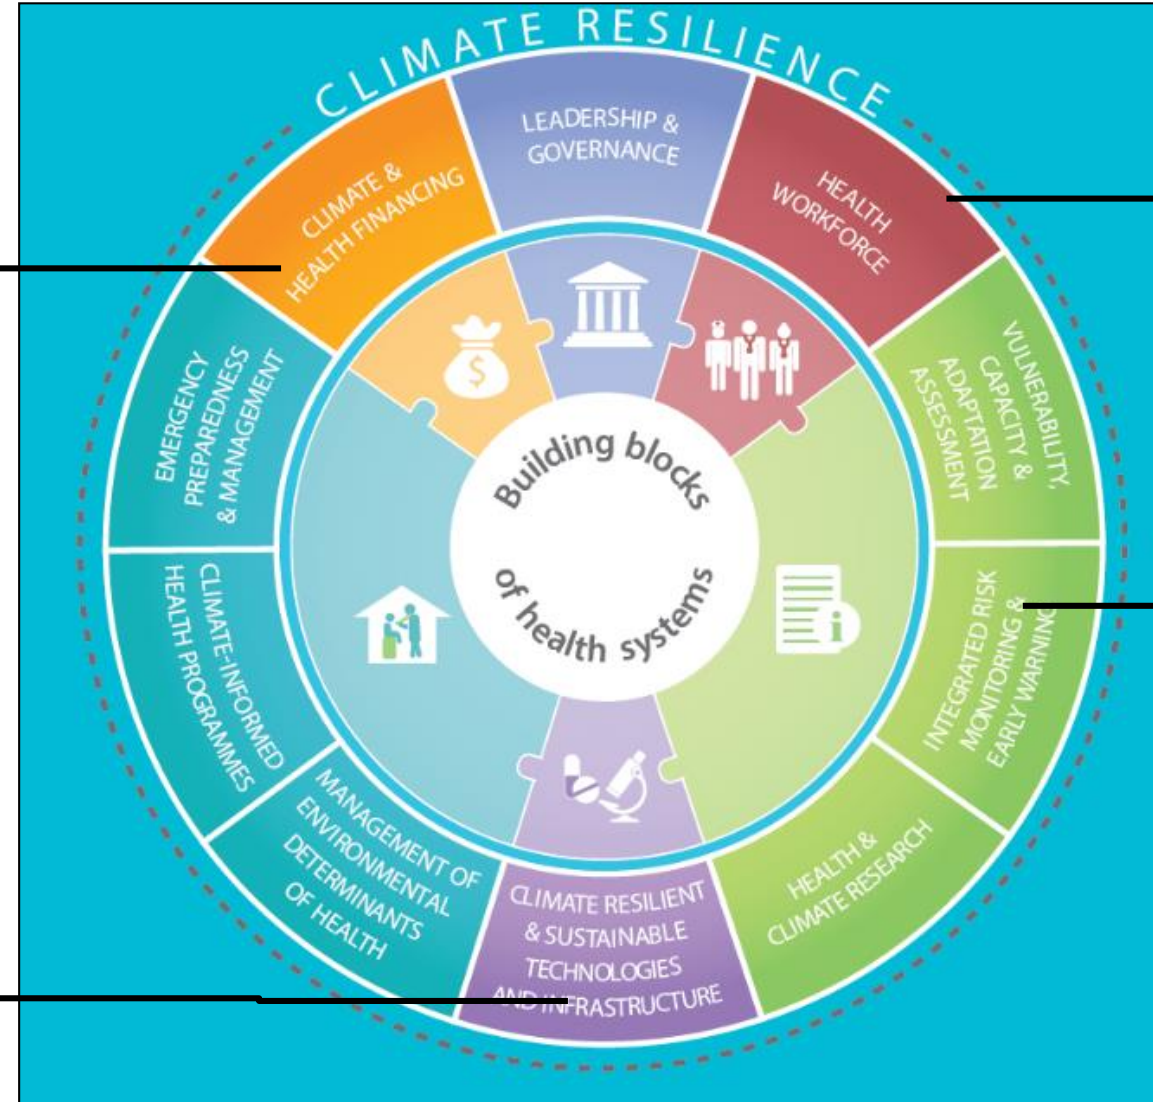

Strengthen health resilience to climate change

GREEN CLIMATE FUND

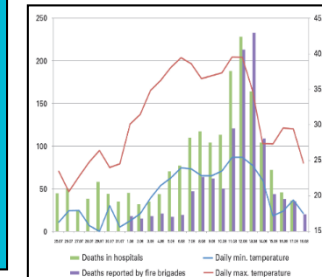

Health access to climate finance

Resilient, sustainable health facilities

Health workers trained, engaged on climate

Climate informed surveillance systems

Connect the climate change and health stories

Delivering a 'Net Zero' National Health Service

Climate change and health in Climatestrikes

Global call to action on climate and health

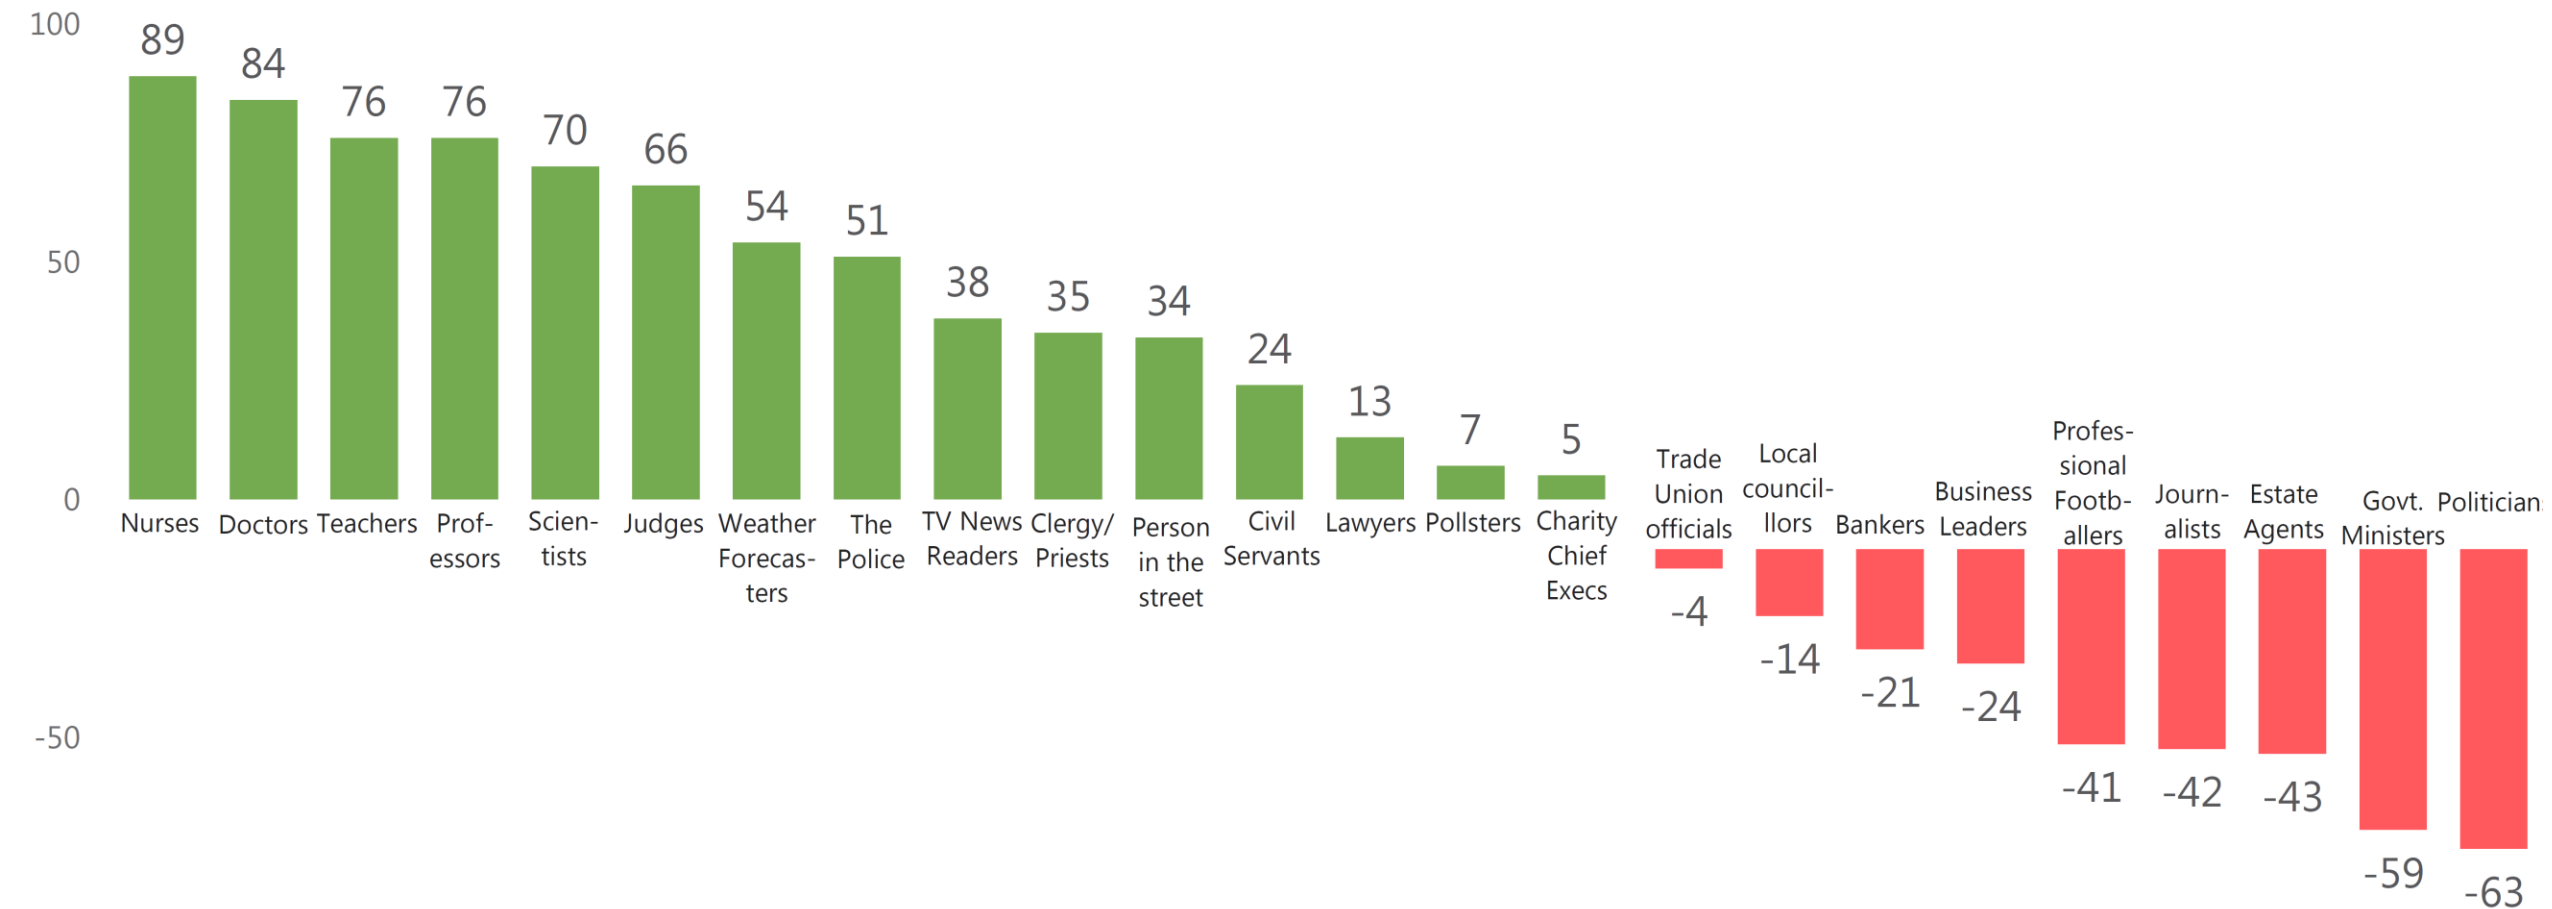

Mobilize the health community - an impartial, professional voice

Health Messages are Motivating, Health Professionals are Trusted

Net trust = % trust to tell the truth - % do not trust to tell the truth

Thank you!
