IFMSA COVID19 RESPONSE

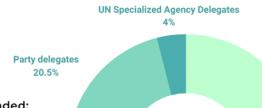

APPLY.EITFOOD.EU

Introduction to Nutrition for Health and Sustainability EIT Food, Introduction to Nutrition for Health and Sustainability,

The IFMSA delegation to the United Nations Conference of Parties (COP25) in Madrid distributed a survey to explore the understanding and attitudes of participants towards health and dietary change in the climate space.

278 participants responded:

- 210 NGOs delegates
- 57 party delegates
- 11 UN Agency Delegates Representing 84 countries.

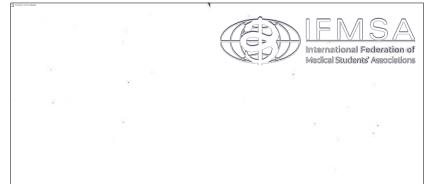

NGOs 75.5%

Although only 36.2% of delegates surveyed were familiar with the EAT-Lancet Planetary Health Diet. they expressed an overall willingness to adopt the planetary health diet.

All delegates indicated that the UNFCCC should cater food in accordance with the planetary health diet at future events.

All delegates, including farmers and individuals from low-income and middleincome countries, believed that dietary practices should be almost as important as food production practices in climate disucssions.

People, planet, health!
